eDiscovery Solutions

Faster, More Secure, and 100% Reliable Large File Transfer
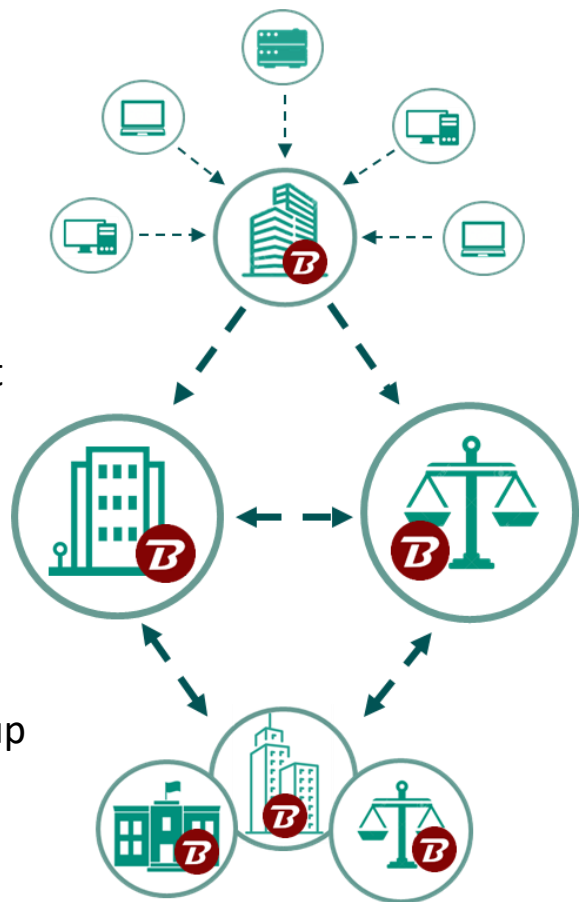

Binfer

Still shipping hard drives or using unreliable cloud and SFTP products to share large files? Binfer has a faster, more secure, and 100% reliable alternative that saves users hours or time and thousands annually.

The Problem

Due to size limits and reliability issues, many eDiscovery professionals waste hours trying to digitally send large data collections between repositories. **Cloud products** have file size limits, reliability issues, and security concerns. **FTP** comes with all those issues and is difficult to setup. All other **large file sharing applications** require software to be installed on both ends, requiring IT admins to get involved. This forces legal professionals to compromise, either breaking data into smaller pieces before digitally sending or uploading it all to an **external hard drive** before shipping it to the destination. These inefficient and antiquated methods of file transfer add up to hundreds of hours and thousands of dollars wasted.

The Solution

Binfer's modern approach to file transfer was built for eDiscovery, with eDiscovery professionals to overcome all the industry's external sharing needs. Binfer creates a dynamic connection directly between sending and receiving devices, never storing data on a third party server. Additionally, the Binfer portable app delivery mechanism provides a revolutionary new way to send and receive large files – one like the industry has never seen before. Digitally send 100s of GBs or even TBs with ease.

- **No file size, format, or volume restrictions**
- **No need for partners to install any new software**
- **Auto-resume for 100% data transfer reliability every time**
- **Up to 10x faster transfer speeds than SFTP**
- **On-the-fly AES 256-bit encryption**
- **Real-time reporting and detailed transfer logs**
- **Completely cloudless for 100% control of sensitive data**
- **Never ship a hard drive again**

Binfer Desktop

Faster, More Secure, and 100% Reliable Large File Transfer

- Establishes the fastest possible connection between sending and receiving devices.
- No slow uploads to cloud servers
- Up to 10x faster than SFTP

FAST

RELIABLE

- Advanced auto-resume from exact point of interruption
- TCP validation for 100% data integrity every time
- Works over any internet connection

- 100% data control, never storing or passing files through a third-party server
- AES-256 bit on-the-fly encryption
- Password protected transfers and uploads

SECURE

Key Applications Included

Web Link

Create a Web Link, allowing non-Binfer users to download files directly from your device using a web browser or the Binfer portable app.

Web Drop

Create a Web Drop, allowing non-Binfer users to upload files directly to your device using a web browser or the Binfer portable app.

Secure Message

Send secure messages, files, or entire folders, notifying your recipients via email. Recipients are provided a link where they can download files using a web browser or the Binfer portable app.

BINFER PORTABLE APP

The most revolutionary new way for legal professionals to send and receive large files!

- **No Software to Install**
- **No File Size Limits**
- **Supports Auto-Resume**
- **AES-256 Bit Encryption**
- **Direct Device-to-Device Transfer with No Third-Party Storage**
